

## CONTENTS

1. REVIEW OF THE FIELD . . . . .	1
1.1. Introduction . . . . .	1
1.2. Physics Potentials and Goals of RHIC . . . . .	2
1.3. Overview of RHIC Machine . . . . .	5
1.4. Superconducting Magnets . . . . .	8
1.4.1. Introduction to the Magnet Geometry . . . . .	8
1.4.2. Superconducting Cable . . . . .	10
1.4.3. Cryogenic System . . . . .	13
1.4.4. Mechanical Design . . . . .	14
1.4.5. Magnetic Design . . . . .	15
1.4.6. Magnet Construction . . . . .	16
1.4.7. Magnet Measurements . . . . .	17
1.5. Magnetic Field Analysis in Accelerator Magnets . . . . .	22
1.5.1. Basic Electromagnetic Field Equations . . . . .	22
1.5.2. Field Harmonic Definitions . . . . .	26
1.5.3. Analytic Expressions for Accelerator Magnets . . . . .	31
1.5.3.1. Field and Vector Potential due to a Line Current . . . . .	31
1.5.3.2. Line Current in a Cylindrical Iron Cavity . . . . .	36
1.5.3.3. Line Current in a Cylindrical Iron Shell . . . . .	40
1.5.3.4. Field and Harmonics due to Current Blocks in Air . . . . .	44
1.5.3.5. Field Harmonics due to Current Blocks in a Cylindrical Iron Shell . . . . .	47
1.5.3.6. COS( $m\theta$ ) Current Distribution for Ideal Fields . . . . .	48
1.5.3.7. COS( $m\theta$ ) Current Distribution in a Cylindrical Iron Shell . . . . .	54
1.5.3.8. Intersecting Circles with a Constant Current Density for Ideal Fields . . . . .	57

1.5.4. Complex Variable Method in 2-d Magnetic Field Calculations . . . . .	60
1.5.4.1. Field due to an array of Line Currents . . . . .	62
1.5.4.2. Beth's Current Sheet Theorem . . . . .	63
1.5.4.3. Example – Cos( $m\theta$ ) current distribution . . . . .	65
1.6. Methods Investigated for Improving Field Quality . . . . .	66
1.6.1. Improvements in the Computational and Analysis Methods . . . . .	66
1.6.2. Field Quality Improvements through Yoke Design . . . . .	67
1.6.3. Field Quality Improvements through Coil Design . . . . .	67
1.6.4. Field Quality Improvements after Construction . . . . .	68
1.6.5. Optimized Cross section Designs . . . . .	69
<b>2. IMPROVEMENTS IN THE COMPUTATIONAL AND ANALYSIS METHODS</b> . . . . .	<b>70</b>
2.1. Introduction . . . . .	70
2.2. Computer Aided Cross-section Measurement and Analysis . . . . .	71
2.3. IMPROVEMENTS IN THE POISSON GROUP CODES . . . . .	78
2.3.1. Upgraded AUTOMESH – Input Method No. 1 . . . . .	79
2.3.2. Upgraded AUTOMESH – Input Method No. 2 . . . . .	83
2.3.3. Upgraded AUTOMESH – Input Method No. 3 . . . . .	88
2.4. Conclusions on the Improvements in the Computational and Analysis Methods . . . . .	91
<b>3. FIELD QUALITY IMPROVEMENTS THROUGH YOKE DESIGN</b> . . . . .	<b>92</b>
3.1. Introduction . . . . .	93
3.2. Reduction in Saturation Induced Allowed Harmonics . . . . .	102
3.2.1. Varying the yoke inner radius . . . . .	103
3.2.2. Varying the yoke outer radius . . . . .	111
3.2.3. Varying the location of the helium bypass hole in the yoke . . . . .	116

3.2.4. Additional Saturation suppressor holes in the iron yoke . . . . .	123
3.2.5. Yoke-yoke alignment keys . . . . .	129
3.2.6. Yoke collaring keys . . . . .	132
3.2.7. Tooth at the midplane of the yoke aperture . . . . .	135
3.2.8. Cutout or Bump in the iron aperture . . . . .	139
3.2.9. Elliptical iron aperture . . . . .	145
3.2.10. Two radius aperture yoke . . . . .	149
3.3. Saturation Induced Allowed Harmonics in RHIC Arc Dipoles . . . . .	153
3.4. Reduction in the Saturation-induced Non-allowed Harmonics . . . . .	169
3.4.1. $b_1$ saturation — Cross talk . . . . .	170
3.4.2. $a_1$ saturation — Cryostat and other sources . . . . .	176
3.5. $a_1$ Saturation in SSC Dipole Magnets . . . . .	182
3.5.1. $\delta a_1$ variation with axial position within a magnet . . . . .	182
3.5.2. Magnet to magnet variations in the integral $\delta a_1$ . . . . .	185
3.5.3. Compensation of the saturation induced $a_1$ in SSC magnets . . . . .	188
3.6. $a_1$ Saturation in RHIC Dipole Magnets . . . . .	190
3.6.1. Magnet to magnet variation in $a_1$ saturation . . . . .	190
3.6.2. Reduction in $a_1$ saturation in RHIC dipoles . . . . .	194
3.7. Conclusions on the Field Quality Improvements through Yoke Design . . . . .	200
4. FIELD QUALITY IMPROVEMENTS THROUGH COIL DESIGN . . . . .	206
4.1. Introduction . . . . .	207
4.2. Sources of Harmonics Allowed by the Magnet Geometry . . . . .	209
4.3. Reduction in the Allowed Harmonics through Wedges . . . . .	210
4.4. Reduction in the Allowed Harmonics in RHIC Arc Dipoles by Changing the Midplane Gap . . . . .	212
4.5. Reduction in $b_3$ in RHIC Quadrupoles with Midplane Gaps . . . . .	214

4.6. Coil Cross-section Iterations without Changing Wedges . . . . .	216
4.7. Conclusions on the Field Quality Improvements through Coil Design . . . . .	219
5. FIELD QUALITY IMPROVEMENTS AFTER CONSTRUCTION . . . . .	220
5.1. Introduction . . . . .	221
5.2. Tuning Shims in Magnet Body for Extra High Field Quality . . . . .	222
5.2.1. Tuning Shims in the RHIC Interaction Region Quadrupoles . . . . .	222
5.2.2. Tuning Shim and the Magnet Design . . . . .	224
5.2.3. Procedure for Implementing the Tuning Shim Correction . . . . .	227
5.2.4. Calculations for Tuning Shim Corrections . . . . .	229
5.2.4.1. Approximate Analytic Expressions for Low Field Estimate . . . . .	230
5.2.4.2. Numerical Calculations for Low Field Correction . . . . .	233
5.2.4.3. Numerical Calculations for High Field Correction . . . . .	243
5.2.5. Symmetries in the Harmonics Generated by Tuning Shims . . . . .	249
5.2.6. Independent and Coupled Changes in Harmonics Correction . . . . .	250
5.2.7. Comparison with the Measurements . . . . .	250
5.2.8. Tuning Shim Correction Vs. External Correctors . . . . .	255
5.3. Tuning Yoke Length at Magnet Ends for Field Correction . . . . .	258
5.3.1. Yoke Length for Integral $a_1$ Correction . . . . .	260
5.3.2. Yoke Length for Integral Transfer Function Correction . . . . .	262
5.4. Conclusions on the Field Quality Improvements after Construction . . . . .	264
6. OPTIMIZED CROSS SECTION DESIGNS . . . . .	265
6.1. Introduction . . . . .	265
6.2. SSC 50 mm Aperture Collider Dipole Magnet Cross-section . . . . .	266

6.2.1. Coil Design . . . . .	266
6.2.2. Low Field Harmonics . . . . .	268
6.2.3. Iron Yoke Design . . . . .	270
6.2.4. Expected Quench Performance . . . . .	278
6.2.5. Effect of Manufacturing Errors on the Allowed Harmonics . . . . .	280
6.2.6. Stored Energy and Inductance Calculations . . . . .	282
6.2.7. Lorentz Force Calculations . . . . .	283
6.2.8. Summary of the Design . . . . .	284
6.3. RHIC 130 mm Aperture Interaction Region Quadrupole Cross-section . . . . .	286
6.3.1. Basic Construction . . . . .	286
6.3.2. Coil Cross Section . . . . .	287
6.3.3. Yoke Cross Section . . . . .	293
6.3.4. Expected Quench Performance . . . . .	300
6.4. Conclusions on the Optimized Cross Section Designs . . . . .	301
7. CONCLUSIONS AND SUGGESTIONS FOR FUTURE WORK . . . . .	302
